Bibliographie relative aux modèles calculables d'équilibre général appliqués aux économies en développement

par

B. Decaluwé[1] et A. Martens[2]

[1] Professeur titulaire au Département d'économique de l'Université Laval, Québec et chercheur régulier au C.R.D.E. de l'Université de Montréal.

[2] Professeur titulaire au Département de sciences économiques de l'Université de Montréal et directeur adjoint pour le développement international au C.R.D.E. de l'Université de Montréal.

Juin 1988

Cette bibliographie a été réalisée grâce au concours de M.-C. Martin, agent de recherche au C.R.D.E. de l'Université de Montréal. R. Lapierre a, avec son efficacité coutumière, assuré la dactylographie.

Cette étude a été publiée grâce à une subvention du fonds F.C.A.R. pour l'aide et le soutien à la recherche. Ce cahier a également été publié par le Centre de recherche et développement en économique (Publication #1188).

Avertissement

En publiant cette bibliographie qui sera mise à jour annuellement, nous souhaitons mettre à la disposition des collègues, chercheurs et étudiants avec qui nous collaborons, au Canada et à l'étranger, un instrument de référence assez complet sur les applications et les récents développements relatifs à l'utilisation de modèles calculables d'équilibre général (MCEG) pour l'étude des économies en développement.

C'est volontairement que nous n'avons pas inclus l'abondante littérature sur les MCEG appliqués aux économies développées, ainsi que celle sur les MCEG mondiaux à multi-pays. Nous avons également omis, sauf cas exceptionnel, les références sur les modèles d'optimisation et les matrices de comptabilité sociale.

Le lecteur intéressé pourra également consulter relativement à la littérature existant dans ce domaine d'intérêt: Borges (1986), Decaluwé, B. et A. Martens (1985, 1986), De Janvry, A. et E. Sadoulet (1986), De Melo (1987), Ginsburgh, V. et J. Mercenier (1987), Robinson, S. (1986), Sanderson, W.C. et J.G. Williamson (1985), Shoven, J.B. et J. Whalley (1984).

La bibliographie est subdivisée en deux parties: la première est consacrée à la liste alphabétique des auteurs, alors que la seconde fournit une sélection de références classées par pays.

Remarks

By publishing this bibliography, which will be updated on an annual basis, we wish to make available to the colleagues, researchers and students with who we collaborate in Canada and abroad, a relatively exhaustive reference tool on the use and applications of computable general-equilibrium models (CGEs) to developing countries.

We decided not to include references to CGEs applications to developed countries as well as to multi-country CGEs of the world economy. We also omitted references to optimization models and social accounting matrices.

The reader will find alternative surveys of the relevant literature in: Borges (1986), Decaluwé, B. and A. Martens (1985, 1986), De Janvry, A. and E. Sadoulet (1986), De Melo (1987), Ginsburgh, V. and J. Mercenier (1987), Robinson, S. (1986), Sanderson, W.C. and J.G. Williamson (1985), Shoven, J.B. and J. Whalley (1984).

The bibliography has two parts:

1. a classification of the references according to the authors' names;
2. a classification of the references according to the country names.
